ISP BISCit White-Labels Spider Networks' Enterprise Virtual Office

ISP eyes the bottom line and offers enterprises hosted interactive business solutions at no technology cost

London, October 17, 2005 – Spider Networks, a leading provider of interactive web communications solutions for enterprise intranets and extranets, today announces that Internet service provider BISCit has white-labelled Spider's virtual office and will market the hosted solution as an integral part of its broadband packages. Called ISP Plus, Spider's virtual office enables BISCit to join a growing number of broadband providers looking to improve the bottom line by offering customers more than Internet access and website hosting deals.

BISCit (www.biscit.net) is an Internet Solutions Consultancy and the ISP-of-choice to SMEs and multinationals in the UK, mainland Europe, North America and the Pacific Basin. Based in London, BISCit provides the most suitable web connectivity, hosting, data storage, business recovery, and complementary network solutions for any enterprise infrastructure.

"BISCit's business is all about retaining customers-for-life and that means delivering each and all sustained value and service every day of the year," says BISCit's marketing director, Michael Edwards. "By white-labelling Spider's Virtual Office, BISCit again differentiates its business model and provides enterprises with a virtual office that simply bolts-on to a website and transforms it into a truly secure interactive intranet or extranet without spending one technology cent."

From one integrated dashboard customised to give the look and feel of an enterprise website, BISCit's virtual office enables enterprise employees, channel partners and suppliers to interact within and beyond the corporate wall. From one dashboard, they can form workgroups to securely share enterprise knowledge and data, join interactive best-practice e-learning centres, and send SMS, audio and video messages across the entire enterprise network or to selected executives.

"Clearly, we're delighted that BISC*it* has also integrated Spider Networks' ISP Plus product into its broadband packages," says Jim Conroy, CEO, Spider Networks. " BISC*it* enterprises now have a virtual office to develop truly effective interactive work environments and gain business advantage."

More on Spider's ISP Plus

Spider's ISP Plus, enables broadband providers to differentiate their services and create new revenue streams without development costs. As white-labelled solutions, ISPs can integrate ISP Plus into their standard Internet access packages and provide consumers either a basic webmail solution or a gold level solution with photo albums, file storage and much more. ISP's can also offer their small and large business customers interactive office tools for enterprise-wide communications, publishing and training from one integrated online environment.

About Spider Networks

Based in London, Spider Networks is the trading arm of BiblioTech and the power behind interactive web communications. From one integrated online environment, over 500,000 users in businesses, sports clubs, government, charities and education use Spider's technology each day to create new revenue streams and to better communicate and interact dynamically within an organisation and beyond with customers, suppliers, channels, partners, members, donors, fans and sponsors.
